### **UPDATE ON THE MANITOUWADGE PGE PROJECT**

**March 16, 2015**

**Thunder Bay, Ontario: White Metal Resources Corp. (TSX-V: WHM)** ("White Metal" or the "Company") would like to announce it has completed drilling on its Manitouwadge PGE Property. The drill hole was to test an area drilled by Noranada Geco Division in 1987. (see press release dated December 9, 2014 White Metals Uncover Diatreme) Diamond drill hole FL-15-01 was drilled to a depth of 162 meters and intersected wide intervals of heterolithic breccia that have been hydrothermally altered. Sulfides consisting of pyrite, pyrrhotite and chalcopyrite were observed throughout the breccia intervals and will be assayed for copper, nickel, platinum group elements and gold content. Core samples have been submitted to the laboratory and results are pending.

The Manitouwadge PGE property is located just west of the Kapuskasing Structural Zone, a deep north east oriented structural corridor that extends from the James Bay Lowlands south west to Lake Superior. White Metal is currently seeking a partner to advance this project.

White Metal is a junior exploration company exploring in Canada and currently has issued and outstanding share capital of 19,316,076 common shares.

Paul Nielsen, P. Geo., is the qualified person for all technical information in this release. To find out more about White Metal Resources Corp., visit our new website at [www.whitemetalres.com](http://www.whitemetalres.com).

**On behalf of the Board of Directors of White Metal Resources Corp.**

"Michael Stares"
